

Thank you for immediately and the reply.

Because it was using translation software, this intention could not be successfully expressed.

This time, a figure is shown and it thinks that it wants to do a story.

① It chooses new preset.

② It puts a presetting name.

③ It sets presetting name " singe " from the custom whisk.

- ④ It chooses a head from the designer screen.  
It does the preparation which changes the head .

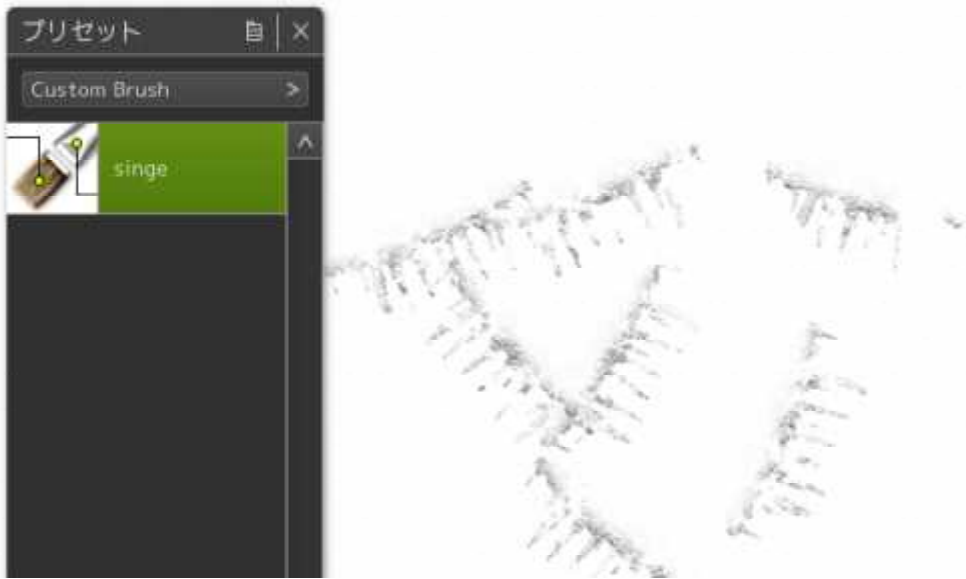

- ⑤ It chooses " Drips " and it presses the OK button.

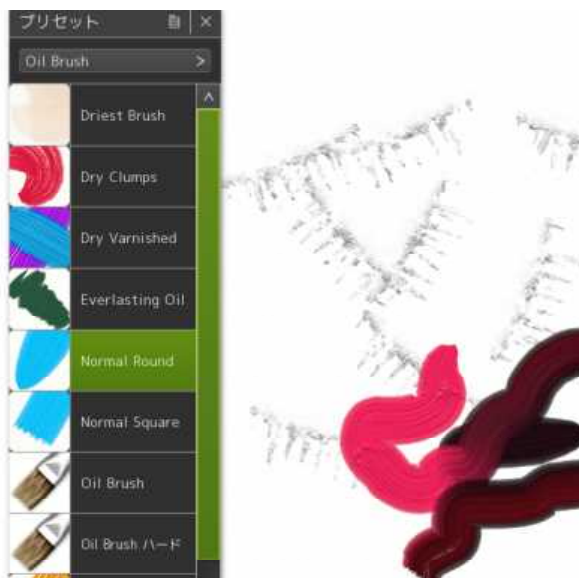

- ⑥ It writes for the test.  
It was possible to confirm that it hung.

⑦ Then, I can confirm that it hangs with the changed head neatly with the screen of the new work.

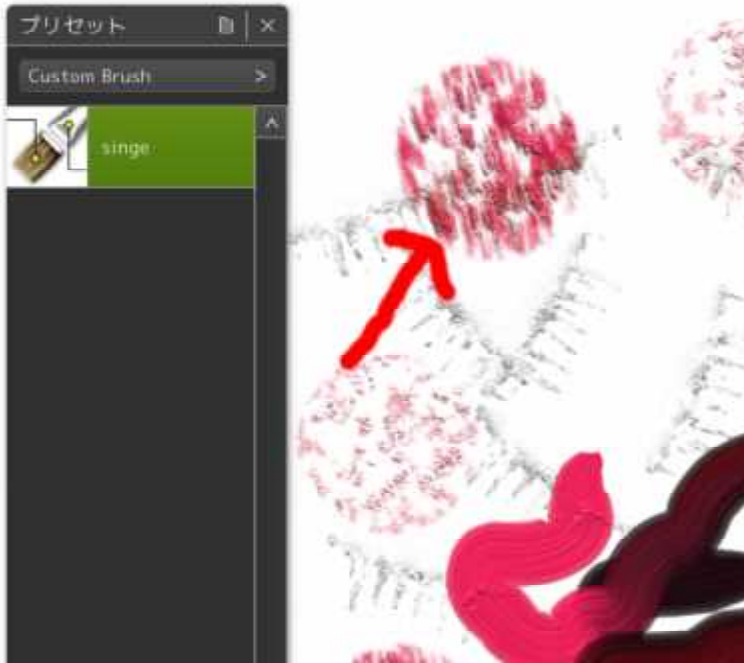

⑧ Here, the problem occurs.

It chooses and it draws different preset.

Then, in the head which it should have chosen, it isn't possible to draw when choosing and drawing the new presetting which was made next.  
( Arrow )

At all, it doesn't become a chosen head even if it makes and it tries different one.  
By where will mistake?  
Let me know because it is troubled.
